

Undercover Surveillance Techniques

This three-day course is designed for law enforcement officers assigned to a unit where conducting surveillance is part of their duties. Too often members are assigned to a specialized unit with little to no experience in surveillance techniques. Properly planned and executed surveillance missions greatly increase the probability of successful and important evidence gathering and follow-up on missions conducted against the targeted individual(s). During this program students will participate in practical exercises utilizing different surveillance methods incorporating foot surveillance, as well as mobile vehicle surveillance.
